

Boosting Technique

- 1) It is one of the type of Ensemble Learning.
- 2) Here we arrange the base model sequentially.

Bagging → Random forest ML.

Boosting → ~~Random~~ ML Algo

Random Forest Algo.

- ① Here multiple models are build parallelly.
- ② Here all base models will work independently.
- ③ for the master model, the contribution from each base model is equal.
- ④ In Random forest you will get fully grown decision tree.

Adaboost ML Algo.

- ① Here multiple models are build sequentially.
- ② Here base models will work dependently.
- ③ Here for the master model, the contribution from each base model is unequal.
- ④ In Adaboost, we will get Stumps.
Stumps \Rightarrow one root node and two leaf node.

Note: * Adaboost can handle both Regression and classification type of problem.

*

ensemble L \Rightarrow multiple base learner

⇒ One Hot Encoding

⇒ Label Encoding

feature Encoding is The process of converting Categorical column into respective Numerical column is called as feature Encoding
